PROFESSIONAL SUMMARY

High-performance Systems Architect and Full-Stack Engineer with proven expertise in building low-latency distributed systems in **Rust**, production **TypeScript / Next.js** SaaS platforms, and reverse-engineered enterprise networking infrastructure. Proven track record of delivering mission-critical commercial solutions: from an on-chain **Arbitrum One cross-DEX arbitrage engine** processing market ticks in sub-microsecond latency ($0-1\ \mu s$), to high-concurrency **session-sharing reverse proxies** and scalable full-stack applications. Strong advocate of zero-allocation architectures, deterministic state machines, kernel-level sandboxing, and test-driven reliability.

TECHNICAL SKILLS

Languages:	Rust (Edition 2021), TypeScript, JavaScript (ES6+), Solidity (0.8.24), Python, SQL, HTML5, CSS3
Systems & Low-Latency:	Tokio (Async Runtime), Alloy Primitives (U256, Address, B256), WebSocket Stream Decoding, Zero-Heap Allocation Hot Paths, Fixed-Point Arithmetic (Q96), Microsecond Telemetry (tracing)
Web3 & Blockchain:	Arbitrum One (L2), Arbitrum Nitro Node Synchronization, Uniswap V3, Camelot V3 (Algebra), Flash Swaps, On-Chain Revert Guards, MEV Sequencer Optimization, EVM, Smart Contracts
Full-Stack & Backend:	Node.js (Express, Fastify), Next.js (App Router), React, Django REST Framework, PostgreSQL, Supabase (Auth, RLS), Prisma ORM, RESTful APIs
DevOps & Security:	Linux (Ubuntu Server, Systemd Sandboxing, UFW Hardening, Hetzner Bare-Metal), Docker / Docker Compose, Windows Server 2019, Reverse Proxies (http-proxy-middleware), Git, GitHub Actions (CI/CD), Vercel
Integrations & APIs:	Stripe API (Metered Billing & Webhooks), Google Gemini API (LLM Integration), WebSockets, JWT Authentication (HttpOnly Cookies)

KEY FEATURED PROJECTS

Arbitrum One Cross-DEX Arbitrage Engine & Nitro Node

Commercial Contract | 48,000 UAH Verified Safe

- Tech Stack: Rust (Tokio, Alloy), Solidity, Docker, Systemd, Arbitrum Nitro, Hetzner Dedicated (Ubuntu 24.04)
- **High-Frequency Core:** Architected an ultra-low latency cross-DEX arbitrage engine monitoring concentrated liquidity pools on **Uniswap V3** and **Camelot V3** (Algebra) for USDT/USDC on Arbitrum One (L2).
 - **Sub-Microsecond Latency (0-1 μs):** Engineered a zero-heap-allocation hot path using `stack-allocated alloy::primitives (U256, Address, B256)` and Tokio ring buffers (`mpsc`), achieving deterministic processing in **0-1 microsecond**.
 - **Fixed-Point Math & On-Chain Guard:** Eliminated float drift using exact 256-bit Q96 fixed-point arithmetic. Developed `ArbitrageExecutor.sol` with Flash Swaps, Sequencer priority fees, and atomic **On-Chain Revert Guard** against slippage loss.
 - **Node Infra & Hardening:** Synchronized a local Arbitrum Nitro node via Docker on NVMe RAID0. Hardened `systemd` daemon via Linux kernel sandboxing (`ProtectSystem=full, PrivateTmp, NoNewPrivileges, UFW`). Verified with 38/38 passed tests and 5/5 delivered stages (10/10 rating).

Enterprise Multi-User Session Reverse Proxy

Commercial Infrastructure Solution

- Tech Stack: Node.js, Express, http-proxy-middleware, Windows Server 2019, PowerShell
- **Reverse Proxy Architecture:** Developed an internal tunneling proxy allowing simultaneous multi-workstation LAN access to a single-seat protected web catalog, normalizing cookies, User-Agents, and headers over local HTTP.
 - **Bidirectional State Sync & Conflict Resolution:** Engineered real-time syncing of `localStorage`, `sessionStorage`, and Envoy cookies. Resolved race conditions and infinite auth loops (`/portal-ui`) via atomic client-server timestamp comparison.
 - **High Availability & Auto-Recovery:** Deployed as an auto-recovering Windows Server 2019 service with 1,000ms debounced disk persistence, socket trap handlers, and self-healing session purges on remote 401/403 errors.

PropText.ai — AI-Powered Real Estate SaaS Platform

[prop-text-ai.vercel.app](#)

Tech Stack: Next.js (App Router), TypeScript, Supabase (PostgreSQL, Auth, RLS), Stripe API, Google Gemini API, Tailwind CSS

- **Production SaaS Architecture:** Designed and deployed a multi-tenant web platform generating automated, high-converting property descriptions for real estate agencies.
- **Metered Billing Infrastructure:** Integrated Stripe checkout and webhooks to manage a hybrid subscription and credit-consumption model, featuring atomic balance reconciliation and fraud prevention.
- **AI Model Pipeline:** Integrated Google Gemini API with automated key rotation, dynamic rate-limiting, and context-engineered prompt templates.
- **Document Generation & Security:** Built client-side Unicode-compliant PDF flyer generator. Enforced Supabase Auth with granular PostgreSQL Row-Level Security (RLS) policies and Zod schema validation.

Commercial E-Shop — High-Performance E-Commerce

[ecoshop-alpha.vercel.app](#)

Tech Stack: React (Vite), Django REST Framework, PostgreSQL, Tailwind CSS, JWT

- **Full-Stack Implementation:** Engineered an end-to-end e-commerce store with dynamic catalog filtering (category, price range, stock availability), real-time cart state management, and an integrated checkout pipeline.
- **Secure Session Handling:** Implemented JWT authentication using HttpOnly, SameSite-strict cookies to mitigate XSS and CSRF attack vectors.
- **Database Optimization:** Structured relational PostgreSQL schemas with optimized Django queriesets, indexing, and REST serialization to achieve sub-50ms API response times.

PROFESSIONAL EXPERIENCE

Systems & Full-Stack Freelance Engineer

[Freelancehunt / Direct Commercial Contracts](#)

2023 — Present

Remote / Contract

- Architected and deployed high-performance backend daemons, low-latency Web3 arbitrage engines, and enterprise networking proxies for commercial clients across Europe and Ukraine.
- Achieved **100% 5-star customer rating** across all completed safe-escrow contracts on Freelancehunt, including multi-stage milestone deliveries totaling over 48,000 UAH.
- Collaborated closely with clients to formulate precise technical specifications, establish deterministic testing pipelines, and configure production bare-metal servers (Ubuntu 24.04, Hetzner, Windows Server).

Web Developer (Internship)

[Marine Plast Center / IT Internships](#)

2024 (6 months)

Odessa, Ukraine

- Developed reactive UI modules using React, Tailwind CSS, and modern JavaScript, improving page load speeds and interface responsiveness.
- Participated in daily Agile/Scrum ceremonies, automated regression testing, code reviews, and Git feature-branch workflows.

EDUCATION

Master of Science (M.S.) in Computer Science / Information Systems — Odessa National University named after I. I. Mechnikov

2023 — 2024

Bachelor of Science (B.S.) in Applied Information Technology — Odessa State Ecological University

2021 — 2023

Associate Degree in Software Engineering (Junior Specialist) — Odessa College of Computer Technologies

2017 — 2021

LANGUAGES

English: Upper-Intermediate / Technical (B1/B2) — Professional proficiency in technical documentation, code reviews & architecture discussion.

Ukrainian: Native (Рідна мова). Russian: Fluent.
